

## PURE UNCONTAMINATED CONSCIOUSNESS

Don't try to be patient, but rather, try to be eternal: sooner or later this “Glossary” of useless words will permit you to overcome the temporal dichotomy between the end and the endless; between “I will complete my comprehension ” and “my comprehension will never end.” Will the author of the glossary die before he finishes it and write the book in his next life, or episode, of the eternal nature of being and existence?

Don't worry, we'll be finishing it in this life, the “always present” writing.

As an introduction, I must mention the potential word “Infinite” which has been utilized many times in previous chapters.

“The time is now!” I would say, but I can't say it because the infinite is never actual, unless...

- Only what is finite Lights the infinite, which is darkness (Darkness- ? To be discussed) and therefore contains the finite.
- That which in a universe is a word, is also a word in the “Infinite Universes,” which are only Part of a Discussion (of Infinite Words) of the Absolute.
- No one knows the journey in the mind of sentient beings; much less, in the history of humanity, of the Infinite (the INFINITE of the Absolute) and of the infinitesimal (the infinitesimal of sentient beings).
- The infinite begins with 1, never reaching 2, because by adding an infinitesimal quantity to 1 -  $1 + 0,0\bar{1}$  - we will never reach 2 (mathematical Certainty of the Oneness of the Absolute).

There is nothing more than this, the CREATION of the Absolute; which, deriving from the Absolute, has Its same Qualities, it is infinite (with a small i). Therefore 2 (Two) is potentially to infinity and, at the same time, Actual (overcome the dichotomy!).

- Let's discuss the Circle and its diameter.

The human attempt to link two points of a circumference... but... they are the most distant among the infinite points of a circle... but...  $\pi$  (pi) LOOKS, SEEMS, to be a finite number! But no! It is NOT, because that would require a calculation with infinite decimals, therefore, it would require infinite time to be calculated as well as the  $\infty$  space to write it. Therefore, for a circle and its diameter we have:

$$\sqrt{x} = \frac{S \infty \text{ (Infinite)}}{t \infty \text{ (Eternal)}}$$

- What the result will be - One, Indeterminate or some other Unsatisfactory word? Couldn't it be that the physical nature of the particles - that, nominating the word infinite OFTEN, utilizes it for finite calculations? Where will the Center of the circle of the Horizon of the events of a black hole reside? Without space and time, does the circle coincide with the central point? How will its diameter be? Could it be infinite decimals of  $\pi$  which coincide with infinitesimal "Number"? We will talk about it later... For now we are approaching the presence and, perhaps, the coincidence or SUPERIMPOSITION of the nature of the infinitely small and of the Infinite LARGE. They seem like two parallel histories, but like all parallels, they meet at the Infinite! And... if we already are at that meeting, moment by moment, while we travel (the parallel lines of duality)?
- Mathematics cannot be the MEASURE of the existence of form, but it is used by modern physics in the theories of relativity, quanta, cosmology, black holes and MODELS of every kind; it seems to appear as the potential infinite (as numbers), with the "recurrence theorem" (one never finishes counting) one can explain everything. This is why physicists, even though they try (uselessly) to eliminate the infinite from their theories, ALWAYS USE IT. Too Interconnected, the "small" and "LARGE" infinities.

There are enigmas in the science of numbers, I will discuss (one of them) in order to help you understand. Let's associate numbers and sets. Two words never associated with the infinite, at the same time, the solution is simple. One, 1

is already an infinite number of numbers ( $0, \bar{0}1 - 0, \bar{0}2$  etc.) and is, at the same time, a set. Here, INDISSOLUBLY connected (the Sacred Bond), are the Infinite and the infinitesimal. And they say that no one can explain the fact that the word “EXIST” does not exist in Mathematics!

It would require infinite time to deal with this word. For now I will stop (I believe this is enough) but I promise to write an Infinitesimal Chapter that will deal with the “New Mathematics.” In any case, Infinite and infinitesimal coexist simultaneously.

I can now go Infinitely in every direction (ignorance would want to go back in time), in the Eternity which contains us, in order to discuss the Pure Uncontaminated Consciousness. That which is Timeless, “at the Origin” of all things, remains and it is the Absolute; The infinitesimal creature is permanent Uncontaminated Consciousness, pure and free of any presence in the Creation, in the world or in the universes of phenomena. This consciousness is neither imaginable nor conceivable, it DOES NOT depend (if not on the Absolute) and it is what manifests (but which has always been) after the infinite (hopefully a bit less) path of being and NON being, and is THE TRUE CONSCIOUSNESS OF UNDEFINED PARADISE (similar to the consciousness of the Angel that you were/are, but don't take off on Pindaric Flights before we talk about it. NEVER useful words!)

Here, the suit which has never been worn in the immense “worlds-universes of phenomena” whose spinning recalls that of a washing machine (right, for dirty clothes). The PURE uncontaminated illusory suit of the illusory being, in Timelessness, the point at the center of the disappearing Circle, the disappearing diameter, the distance. Like Bosons (named after Bose, which you should study) they are superimposed, and what looks like an infinitely large number becomes an infinitely small point, which... disappears... to reappear in another universe - but we will talk about that when we are there.
